WISP-DC: evaluated decision path and supporting evidence
User workload and constraints
Training: deadline, limits, budget
Inference: throughput, latency, accuracy
Workload profile and evidence boundary
S1 training feasibility model
S2 inference feasibility model
Hard-constraint filter and explainable ranking
Recommend configuration
Return infeasible
Empirical performance evidence
MLPerf Training v4.0 traces
MLPerf Inference v5.0 results
Prototype catalogue layer
OEM server/GPU metadata
Extended hardware tables
(static/future implementation use)
Bounded supporting checks
Rack fit and power proxy (S1)
Verified cloud cost where available
Evidence and limitation log
